

A list of built-in objects in ofelia.

WINDOW

- `GfWindow` - handle the output window
- `GfGetWidth` - get the width of the current window
- `GfGetHeight` - get the height of the current window
- `GfGetDimen` - get the dimensions of the current window
- `GfGetScale` - get the scale of the current window
- `GfGetFrameNum` - get the number of frames rendered
- `GfGetFrameRate` - get the actual frame rate of the current window
- `GfGetTargetFrameRate` - get the target frame rate of the current window
- `GfGetElapsedTime` - get the elapsed time in milliseconds
- `GfGetLastFrameTime` - get the last frame time in milliseconds
- `GfGetOrienLock` - get the orientation lock state of the current window
- `GfGetOrien` - get the orientation of the current window
- `GfGetFullscreen` - get the fullscreen state of the current window
- `GfGetFocus` - get the focus state of the current window
- `GfGetPosX` - get the x position of the current window
- `GfGetPosY` - get the y position of the current window
- `GfGetPos` - get the position of the current window
- `GfGetScreenWidth` - get the width of the current device's screen
- `GfGetScreenHeight` - get the height of the current device's screen
- `GfGetScreenDimen` - get the dimensions of the current device's screen
- `GfGetRetina` - get the retina scale of the current device's screen
- `GfGetBgColorR` - get the r value of the background color
- `GfGetBgColorG` - get the g value of the background color
- `GfGetBgColorB` - get the b value of the background color
- `GfGetBgColor` - get the background color of the current window
- `GfGetWindow` - check if a window exists
- `GfGetFirstRenderOrder` - get the first rendering order
- `GfGetLastRenderOrder` - get the last rendering order
- `GfTouchListener` - listen to the touch events
- `GfMouseListener` - listen to the mouse events
- `GfScrollListener` - listen to the mouse scroll events
- `GfKeyListener` - listen to the key events
- `GfAccelerometer` - listen to the accelerometer events
- `GfScaleListener` - listen to the updated scale of the current window
- `GfOrientationListener` - listen to the updated orientation of the current window
- `GfFullscreenListener` - listen to the fullscreen mode of the current window
- `GfFocusListener` - listen to the focus state of the current window
- `GfPostListener` - listen to the updated position of the current window
- `GfWindowListener` - listen to the creation/destruction of the current window
- `GfWindowLoadBang` - listen to the creation of the current window
- `GfWindowCloseBang` - listen to the destruction of the current window
- `GfBackListener` - listen to the back button press on android devices

GRAPHICS

- `GfHead` - the start of a rendering chain
- `GfFransLate` - move along the coordinate system
- `GfRotateX` - rotate around the x-axis of the coordinate system
- `GfRotateY` - rotate around the y-axis of the coordinate system
- `GfRotateZ` - rotate around the z-axis of the coordinate system
- `GfRotateXYZ` - rotate around the xyz-axis of the coordinate system
- `GfRotate` - produce a rotation of angle around the vector
- `GfScale` - scale along the coordinate system
- `GfPushMatrix` - push the current matrix
- `GfPopMatrix` - pop the current matrix
- `GfSetColor` - set the draw color
- `GfSetBgColor` - set the background color
- `GfSetRectMode` - set the align mode for drawing rectangular objects
- `GfSetTextMode` - set the align mode for drawing texts
- `GfSetFillMode` - set the fill mode for drawing shaped objects
- `GfSetPolyMode` - set the poly winding mode for drawing
- `GfSetBlendMode` - set the blend mode for drawing
- `GfSetLineWidth` - enable/disable the lined objects
- `GfSetLineSmoothing` - enable/disable the smoothing for lines
- `GfSetCircleRes` - set the resolution for circular objects
- `GfSetCurveRes` - set the resolution for curved objects
- `GfPushStyle` - push the current style
- `GfPopStyle` - pop the current style
- `GfSepMatrix` - separate render chains in matrix
- `GfSepStyle` - separate render chains in style
- `GfSeparator` - separate render chains in matrix and style
- `GfViewport` - setup the drawing viewport
- `GfSetDepthTest` - enable/disable the depth test
- `GfSetArbTex` - enable/disable the use of ARB textures
- `GfSetAntiAliasing` - enable/disable the anti-aliasing for lines
- `GfSetBgAuto` - enable/disable the auto background clearing function
- `GfClear` - clear the color and depth bits of current renderer
- `GfClearColor` - clear the color bits of current renderer
- `GfClearDepth` - clear the depth bits of current renderer
- `GfClearAlpha` - clear the alpha channel of current renderer
- `GfBeginShape` - start drawing a new shape
- `GfEndShape` - finish drawing the shape and draw it to the screen
- `GfNextContour` - draw multiple contours within one shape
- `GfVertex2d` - specify a single 2d point of a shape
- `GfVertex3d` - specify a single 3d point of a shape
- `GfCurveVertex2d` - specify a single 2d point of a shape
- `GfCurveVertex3d` - specify a single 3d point of a shape
- `GfBezierVertex2d` - describe a bezier curve through three points of a shape
- `GfBezierVertex3d` - describe a bezier curve through three points of a shape
- `GfCircle` - draw a circle
- `GfEllipse` - draw an ellipse
- `GfArc` - draw an arc
- `GfSector` - draw a sector
- `GfLine2d` - draw a 2d line
- `GfLine3d` - draw a 3d line
- `GfCurve2d` - draw a 2d curve
- `GfCurve3d` - draw a 3d curve
- `GfBezier2d` - draw a 2d bezier curve
- `GfBezier3d` - draw a 3d bezier curve
- `GfQuadBezier2d` - draw a 2d quadratic bezier curve
- `GfQuadBezier3d` - draw a 3d quadratic bezier curve
- `GfTriangle2d` - draw a 2d triangle
- `GfTriangle3d` - draw a 3d triangle
- `GfEqTriangle` - draw an equilateral triangle
- `GfIsoTriangle` - draw an isosceles triangle
- `GfQuad2d` - draw a 2d quadrilateral
- `GfQuad3d` - draw a 3d quadrilateral
- `GfSquare` - draw a square
- `GfRectangle` - draw a rectangle
- `GfRectRounded` - draw a rounded rectangle with a given corner radius
- `GfRectRounded4` - draw a rounded rectangle with a given 4 corner radiuses
- `GfCross` - draw a cross
- `GfHeart` - draw a heart
- `GfMoon` - draw a moon
- `GfRegPolygon` - draw a regular polygon
- `GfStar` - draw a star
- `GfAxis` - draw axes
- `GfBox` - draw a box
- `GfCone` - draw a cone
- `GfCylinder` - draw a cylinder
- `GfCosphere` - draw an icosphere
- `GfPlane` - draw a plane
- `GfSphere` - draw a sphere
- `GfArrow` - draw an arrow
- `GfGrid` - draw grid planes
- `GfGridPlane` - draw a yz grid plane
- `GfRotationAxes` - draw a set of 3-axis aligned circular bands
- `GfLoadPolyLine2d` - store an array of polyline2d commands
- `GfLoadPolyLine3d` - store an array of polyline3d commands
- `GfDrawPolyLine2d` - draw the stored polyline2d
- `GfDrawPolyLine3d` - draw the stored polyline3d
- `GfDoesPolyLine2dNameExist` - check the existence of a polyline2d variable name
- `GfDoesPolyLine3dNameExist` - check the existence of a polyline3d variable name
- `GfEditPolyLine2dPoint` - edit the stored polyline2d point
- `GfEditPolyLine3dPoint` - edit the stored polyline3d point
- `GfGetPolyLine2dPoint` - get a polyline2d point at the given index
- `GfGetPolyLine3dPoint` - get a polyline3d point at the given index
- `GfGetPolyLine2dPoints` - get all polyline2d points as a list
- `GfGetPolyLine3dPoints` - get all polyline3d points as a list
- `GfIsPointInsidePolyLine2d` - check if a 2d point is within a closed polyline2d
- `GfIsPointInsidePolyLine3d` - check if a 2d point is within a closed polyline3d
- `GfGetPolyLine2dCommand` - get a polyline2d command at the given index
- `GfGetPolyLine3dCommand` - get a polyline3d command at the given index
- `GfGetPolyLine2dCommands` - get all polyline2d commands as a list
- `GfGetPolyLine3dCommands` - get all polyline3d commands as a list
- `GfGetPolyLine2dBoundingBox` - get the dimensions of the polyline2d bounding box
- `GfGetPolyLine3dBoundingBox` - get the dimensions of the polyline3d bounding box
- `GfGetPolyLine2dCentroid` - get the center position of the polyline2d area
- `GfGetPolyLine3dCentroid` - get the center position of the polyline3d area
- `GfGetPolyLine2dArea` - get the precise area of the polyline2d
- `GfGetPolyLine3dArea` - get the precise area of the polyline3d
- `GfGetPolyLine2dPerimeter` - get the size of the perimeter of the polyline2d
- `GfGetPolyLine3dPerimeter` - get the size of the perimeter of the polyline3d
- `GfLoadPath2d` - store an array of path2d commands
- `GfLoadPath3d` - store an array of path3d commands
- `GfDrawPath2d` - draw the stored path2d
- `GfDrawPath3d` - draw the stored path3d
- `GfDoesPath2dNameExist` - check the existence of a path2d variable name
- `GfDoesPath3dNameExist` - check the existence of a path3d variable name
- `GfGetPath2dPoint` - get a path2d point at the given index
- `GfGetPath3dPoint` - get a path3d point at the given index
- `GfGetPath2dPoints` - get all path2d points as a list
- `GfGetPath3dPoints` - get all path3d points as a list
- `GfIsPointInsidePath2d` - check if a 2d point is within a closed path2d
- `GfIsPointInsidePath3d` - check if a 2d point is within a closed path3d
- `GfGetPath2dCommand` - get a path2d command at the given index
- `GfGetPath3dCommand` - get a path3d command at the given index
- `GfGetPath2dCommands` - get all path2d commands as a list
- `GfGetPath3dCommands` - get all path3d commands as a list
- `GfGetPath2dTessellation` - get the tessellation data to convert path2d to mesh2d
- `GfGetPath2dBoundingBox` - get the dimensions of the path2d bounding box
- `GfGetPath3dBoundingBox` - get the dimensions of the path3d bounding box
- `GfGetPath2dCentroid` - get the center position of the path2d area
- `GfGetPath3dCentroid` - get the center position of the path3d area
- `GfGetPath2dArea` - get the precise area of the path2d
- `GfGetPath3dArea` - get the precise area of the path3d
- `GfGetPath2dPerimeter` - get the size of the perimeter of the path2d
- `GfGetPath3dPerimeter` - get the size of the perimeter of the path3d
- `GfCreateFbo` - create framebuffer object
- `GfBindFboTex` - bind the stored fbo's texture
- `GfDrawFbo` - draw the stored fbo
- `GfDoesFboNameExist` - check the existence of a fbo variable name
- `GfIsFboAllocated` - check if the fbo is allocated or not
- `GfGetFboDimen` - get the dimensions of the fbo
- `GfGetFboType` - get the type of the fbo
- `GfCreateImage` - create an image
- `GfLoadImage` - store an array of images
- `GfEditImage` - edit the stored image
- `GfSaveImage` - save image to disk
- `GfBindImageTex` - bind the stored image's texture
- `GfDrawImage` - draw the stored image
- `GfDrawSubImage` - draw a subsection of the image
- `GfDoesImageNameExist` - check the existence of an image variable name
- `GfGetImagePath` - get the absolute path of the image
- `GfIsImageAllocated` - check if the image is allocated or not
- `GfGetImageDimen` - get the dimensions of the image
- `GfGetImageType` - get the type of the image
- `GfGetImageColorAt` - get the color of a pixel at the specified x, y index
- `GfGetImageTexCoord` - get the texture coordinate of the image from 2d vertex
- `GfGetImageTexCoords` - get the texture coordinates of the image from 2d vertices
- `GfLoadFont` - store an array of fonts
- `GfEditFont` - edit the stored font
- `GfBindFontTex` - bind the stored font's texture
- `GfDrawText` - draw a text using the stored font
- `GfDrawTextAsShapes` - draw a text as shapes using the stored font
- `GfDoesFontNameExist` - check the existence of a font variable name
- `GfGetFontPath` - get the absolute path of the font
- `GfGetFontSize` - get the size of the font
- `GfIsFontLoaded` - check if the font is loaded or not
- `GfGetTextBoundingBox` - get the dimensions of the text bounding box
- `GfGetFontLetterSpacing` - get the letter spacing of the font
- `GfGetFontLineHeight` - get the line height of the font
- `GfGetFontSpaceSize` - get the space size of the font
- `GfGetTextMesh2dCommands` - get the mesh2d data based on the font and text
- `GfGetTextMesh3dCommands` - get the mesh3d data based on the font and text
- `GfLoadMesh2d` - store a set of arrays for a 2d mesh
- `GfLoadMesh3d` - store a set of arrays for a 3d mesh
- `GfDrawMesh2d` - draw the stored mesh2d
- `GfDrawMesh3d` - draw the stored mesh3d
- `GfDoesMesh2dNameExist` - check the existence of a mesh2d variable name
- `GfDoesMesh3dNameExist` - check the existence of a mesh3d variable name
- `GfEditMesh2dVertex` - edit the stored mesh2d vertex
- `GfEditMesh3dVertex` - edit the stored mesh3d vertex
- `GfEditMesh2dIndex` - edit the stored mesh2d index
- `GfEditMesh3dIndex` - edit the stored mesh3d index
- `GfEditMesh2dNormal` - edit the stored mesh2d normal
- `GfEditMesh3dNormal` - edit the stored mesh3d normal
- `GfEditMesh2dTexCoord` - edit the stored mesh2d texture coordinate
- `GfEditMesh3dTexCoord` - edit the stored mesh3d texture coordinate
- `GfEditMesh2dColor` - edit the stored mesh2d color
- `GfEditMesh3dColor` - edit the stored mesh3d color
- `GfEditMesh2dVertex` - edit the mesh2d vertex at the given index
- `GfEditMesh3dVertex` - edit the mesh3d vertex at the given index
- `GfEditMesh2dIndex` - edit the mesh2d index at the given index
- `GfEditMesh3dIndex` - edit the mesh3d index at the given index
- `GfEditMesh2dNormal` - edit the mesh2d normal at the given index
- `GfEditMesh3dNormal` - edit the mesh3d normal at the given index
- `GfEditMesh2dTexCoord` - edit the mesh2d texture coordinate at the given index
- `GfEditMesh3dTexCoord` - edit the mesh3d texture coordinate at the given index
- `GfEditMesh2dColor` - edit the mesh2d color at the given index
- `GfEditMesh3dColor` - edit the mesh3d color at the given index
- `GfGetMesh2dVertices` - get all mesh2d vertices as a list
- `GfGetMesh3dVertices` - get all mesh3d vertices as a list
- `GfGetMesh2dIndices` - get all mesh2d indices as a list
- `GfGetMesh3dIndices` - get all mesh3d indices as a list
- `GfGetMesh2dNormals` - get all mesh2d normals as a list
- `GfGetMesh3dNormals` - get all mesh3d normals as a list
- `GfGetMesh2dNormals` - get all mesh2d normals as a list
- `GfGetMesh2dTexCoords` - get all mesh2d texture coordinates as a list
- `GfGetMesh3dTexCoords` - get all mesh3d texture coordinates as a list
- `GfGetMesh2dColors` - get all mesh2d colors as a list
- `GfGetMesh3dColors` - get all mesh3d colors as a list
- `GfGetMesh2dCommands` - get all mesh2d commands as a list
- `GfGetMesh3dCommands` - get all mesh3d commands as a list
- `GfGetMesh2dBoundingBox` - get the dimensions of the mesh2d bounding box
- `GfGetMesh3dBoundingBox` - get the dimensions of the mesh3d bounding box
- `GfGetMesh2dCentroid` - get the centroid of all the vertices in the mesh2d
- `GfGetMesh3dCentroid` - get the centroid of all the vertices in the mesh3d
- `GfEasyCam` - a simple camera for interacting with objects in 3d space
- `GfCamera` - a basic camera for interacting with objects in 3d space
- `GfPointLight` - a light that spreads outward evenly in all directions
- `GfSpotLight` - a light that spreads outward in a cone
- `GfDirectionalLight` - a light that comes evenly from a given direction
- `GfMaterial` - set the material of the object

TYPES

- `GfLoadFloat` - store an array of floats
- `GfEditFloat` - edit the stored float
- `GfDoesFloatNameExist` - check the existence of a float variable name
- `GfGetFloat` - get a float element at the given index
- `GfGetFloats` - get all float elements as a list
- `GfGetFloatAverage` - get the average value of float elements
- `GfLoadVec2f` - store an array of two dimensional vectors
- `GfEditVec2f` - edit the stored vec2f
- `GfDoesVec2fNameExist` - check the existence of a vec2f variable name
- `GfGetVec2f` - get a vec2f element at the given index
- `GfGetVec2fs` - get all vec2f elements as a list
- `GfGetVec2fAverage` - get the average value of vec2f elements
- `GfGetVec2fAngle` - get the angle in degrees between two vec2fs
- `GfGetVec2fAngleRad` - get the angle in radians between two vec2fs
- `GfGetVec2fDist` - get the distance between two vec2fs
- `GfGetVec2fDistSquared` - get the squared distance between two vec2fs
- `GfGetVec2fLength` - get the length of the vec2f element
- `GfGetVec2fLengthSquared` - get the squared length of the vec2f element
- `GfLoadVec3f` - store an array of three dimensional vectors
- `GfEditVec3f` - edit the stored vec3f
- `GfDoesVec3fNameExist` - check the existence of a vec3f variable name
- `GfGetVec3f` - get a vec3f element at the given index
- `GfGetVec3fs` - get all vec3f elements as a list
- `GfGetVec3fAverage` - get the average value of vec3f elements
- `GfGetVec3fAngle` - get the angle in degrees between two vec3fs
- `GfGetVec3fAngleRad` - get the angle in radians between two vec3fs
- `GfGetVec3fDist` - get the distance between two vec3fs
- `GfGetVec3fDistSquared` - get the squared distance between two vec3fs
- `GfGetVec3fDot` - get the dot product of two vec3fs
- `GfGetVec3fLength` - get the length of the vec3f element
- `GfGetVec3fLengthSquared` - get the squared length of the vec3f element
- `GfLoadVec4f` - store an array of four dimensional vectors
- `GfEditVec4f` - edit the stored vec4f
- `GfDoesVec4fNameExist` - check the existence of a vec4f variable name
- `GfGetVec4f` - get a vec4f element at the given index
- `GfGetVec4fs` - get all vec4f elements as a list
- `GfGetVec4fAverage` - get the average value of vec4f elements
- `GfGetVec4fDist` - get the distance between two vec4fs
- `GfGetVec4fDistSquared` - get the squared distance between two vec4fs
- `GfGetVec4fDot` - get the dot product of two vec4fs
- `GfGetVec4fLength` - get the length of the vec4f element
- `GfGetVec4fLengthSquared` - get the squared length of the vec4f element
- `GfLoadColor` - store an array of colors
- `GfEditColor` - edit the stored color
- `GfDoesColorNameExist` - check the existence of a color variable name
- `GfGetColor` - get a color element at the given index
- `GfGetColors` - get all color elements as a list
- `GfLoadSymbol` - store an array of symbols
- `GfEditSymbol` - edit the stored symbol
- `GfDoesSymbolNameExist` - check the existence of a symbol variable name
- `GfGetSymbol` - get a symbol element at the given index
- `GfGetSymbols` - get all symbol elements as a list

MATH

- `GfAngleDifferenceDegrees` - calculate the difference between two angles in degrees
- `GfAngleDifferenceRadians` - calculate the difference between two angles in radians
- `GfDegToRad` - convert degrees to radians
- `GfRadToDeg` - convert radians to degrees
- `GfDist2d` - calculate the 2d distance between two points
- `GfDist3d` - calculate the 3d distance between two points
- `GfDistSquared2d` - calculate the squared 2d distance between two points
- `GfDistSquared3d` - calculate the squared 3d distance between two points
- `GfInRange` - determine if a number is inside of a given range
- `GfClamp` - clamp a value between min and max
- `GfNormalize` - map the input value to be within 0 and 1
- `GfLerp` - linearly interpolate a value within a range
- `GfLerpDegrees` - linearly interpolate a value between two angles in degrees
- `GfLerpRadians` - linearly interpolate a value between two angles in radians
- `GfRandom` - get a random floating point number between -1 and 1
- `GfRandomInt` - get a random floating point number between 0 and 1
- `GfSeedRandom` - seed the random number generator with a unique value
- `GfWrap` - wrap a value if it overflows a given range
- `GfWrapDegrees` - wrap a value within the angle in degrees
- `GfWrapRadians` - wrap a value within the angle in radians
- `GfMap` - map the value to a new value
- `GfNextPow2` - calculate the next larger power of 2
- `GfNoise` - calculate a simplex noise value between 0 and 1
- `GfSignedNoise` - calculate a simplex noise value between -1 and 1
- `GfSign` - get the sign of a value

UTILS

- `GfAppend` - append a symbol to an incoming message
- `GfPrepend` - prepend a symbol to an incoming message
- `GfPack` - combine several atoms into one message
- `GfListFind` - get indices of sublists found in a list
- `GfFindList` - get indices of sublists found in a list
- `GfListInsert` - insert a list into a list
- `GfInsertList` - insert a list into a list
- `GfListFill` - fill a list with element
- `GfFillList` - fill a list with element
- `GfListReplace` - replace sublists in a list
- `GfReplaceList` - replace sublists in a list
- `GfListRemove` - remove sublists in a list
- `GfRemoveList` - remove sublists in a list
- `GfListErase` - remove a range of elements from a list
- `GfEraseList` - remove a range of elements from a list
- `GfListSort` - sort a list in ascending or descending order
- `GfListUnique` - remove duplicates from a list
- `GfListReverse` - reverse the order of a list
- `GfListShuffle` - randomly change the order of a list
- `GfListToSymbol` - convert a list into a symbol
- `GfSymbolToList` - convert a symbol into a list
- `GfHexToHsb` - convert hex color values to hsb color values
- `GfHexToRgb` - convert hex color values to rgb color values
- `GfHsbToHex` - convert hsb color values to hex color values
- `GfHsbToRgb` - convert hsb color values to rgb color values
- `GfRgbToHex` - convert rgb color values to hex color values
- `GfRgbToHsb` - convert rgb color values to hsb color values
- `GfSend` - nonlocal shared value
- `GfSend` - send messages without patch cords
- `GfReceive` - receive messages without patch cords
- `GfExpr` - expression evaluation object
- `GfDefine` - expression evaluation object
- `GfPatch` - open/close pd patches
- `GfGetCanvasName` - get the unique name of the canvas
- `GfGetDollarZero` - get the \$0 value of the patch
- `GfGetDollarArgs` - get the arguments of the patch
- `GfError` - create an error in the pd console
- `GfFiddle` - create/remove/rename/copy/move files
- `GfSaveURL` - save a file from a url
- `GfDoesFileExist` - check the existence of a file
- `GfGetDirectoryFileNames` - get the list of file names in a directory
- `GfGetDirectoryFilePaths` - get the list of file paths in a directory
- `GfDirectory` - create/remove/rename/copy/move directories
- `GfGetPatchDirectory` - get the directory of the patch
- `GfGetHomeDirectory` - get the user home directory on desktop platforms
- `GfGetDocumentsDirectory` - get the documents directory on ios devices
- `GfGetLibraryDirectory` - get the library directory on ios devices
- `GfGetTemporaryDirectory` - get the temporary directory on ios devices
- `GfDoesDirectoryExist` - check the existence of a directory
- `GfGetAudioDevices` - get a list of all available input/output audio devices
- `GfGetAudioDevices` - get input/output audio device, sample rate and block size
- `GfGetMidiDevices` - get a list of all available input/output midi devices
- `GfGetMidiDevices` - get input/output midi device
- `GfCount` - count over a range
- `GfCountUntil` - count over a range at once
- `GfStep` - increase or decrease a value in steps
- `GfEximate` - smoothly change a value over time
- `GfSwitch` - pass messages from a specific inlet
- `GfGetMinFloat` - route a message to an outlet
- `GfGetMaxFloat` - get the lowest possible float
- `GfGetPlatform` - get the OS platform being used
- `GfGetDate` - get the day/month/year
- `GfGetTime` - get the time in seconds/minutes/hours

AUDIO

- `GfSine~` - sine wave oscillator
- `GfTriangle~` - triangle wave oscillator
- `GfSaw~` - sawtooth wave oscillator
- `GfSquare~` - square wave oscillator
- `GfPulse~` - pulse wave oscillator
- `GfBTLTriangle~` - bandlimited triangle wave oscillator
- `GfBLSaw~` - bandlimited sawtooth wave oscillator
- `GfBLSquare~` - bandlimited square wave oscillator
- `GfBLPulse~` - bandlimited pulse wave oscillator
- `GfLowPass~` - low-pass filter with resonance control
- `GfHighPass~` - high-pass filter with resonance control
- `GfBandPass~` - band-pass filter with Q control
- `GfNotch~` - notch filter with bandwidth control
- `GfPeakIn~` - peaking filter with Q and gain control
- `GfLowShelf~` - low shelf filter with shelf slope and gain control
- `GfHighShelf~` - high shelf filter with shelf slope and gain control
- `GfAllPass~` - all-pass filter with bandwidth control
